Web Scraping Scheduler - planning

For the products and retailers that you've selected in 'Web scraping assignment – Python basic,' schedule to scrape prices and consumer ratings for 1 week.

Submit a Python file, file extension .py, that you plan to execute. You should submit one python file that is a clean program that should only include the lines that you had used.
- For one product at one retailer, you will have 7 price points and 7 consumer ratings
- Thus, you should have total of 175 data points (5 products, 5 retailers for 7 days) for prices and consumer ratings

Please note that you are expected to submit a Python file, not necessarily the result of the scraped information.
